

Manage from Cascade Engineering

Manage

from Cascade Engineering

Manage is a complete container management program designed to give you worry free ownership of your container fleet. From the moment you purchase your containers, Cascade will take care of the rest.

We provide:

- **Assembly & Delivery:** Seamless assembly and distribution to your resident community
- **Verification:** Verification that your customer database is accurate
- **Total Container Management:** Total Container Management throughout the lifetime of the container
- **Recycling:** Recycling of the container at the end of its useful life

We do this while providing you with the highest level of communication, documentation and information to help you run your business.

What makes Manage different?

We use technology to assign the container to a specific address, measure its activity, and then provide you with ongoing information on your container fleet. You will know where each specific container resides as well as its maintenance history. We use barcodes or RFID tags on the containers, and hardware/web-based software to document the information on each container.
