

SmartCart™

from Cascade Engineering

RFID/Data Acquisition – collecting information to help you meet today's challenges in the waste industry.

SmartCart™

from Cascade Engineering

Cascade Engineering is pleased to introduce SmartCart™

With a SmartCart, you can collect data that helps you:

- Assign an RFID tag number to specific locations
- Separate information on waste and recycling that is generated by your government, local businesses and residential customers
- Measure efficiencies for each route
- Generate data on landfill diversion
- Maximize your profit margins for waste and recycling

Cascade software will interact with readers and hardware to develop a full functioning system. You can collect information on a real time basis and manage your business more efficiently. The software provides the ability to:

- Analyze trends during seasonal events and prepare for variability
- Collect information on the truck's speed, direction, locations and number of pick-ups completed
- Minimize missed pick ups due to inexperienced/new driver or carts not out
- Provide customer with proof as to time of pick up resulting in fewer discrepancies
- Maintain accurate billing based on waste generated

For more information on how RFID can help you collect more than refuse, contact Cascade Engineering at 1-800-968-2278 or www.cascadecart.com
